18

weeks of operation

Weekly attendance — a consistent growth curve

Weekly swim check-ins grew roughly five-fold between February and late May 2026 — from 1–2 swims per week at launch to a sustained 10–13 swims per week across 4–5 sessions. Growth came from both new swimmers joining and existing swimmers attending more consistently: unique swimmers per week (blue line) tracks total check-ins closely, showing attendance is broad-based rather than driven by a few individuals.

Every number on this page is a verified check-in.

Attendance is recorded poolside on the SwimBuddz platform per swimmer per session — not estimated.

Programmes, Cadence & Retention

What the attendance is made of — and who keeps coming back

Monthly check-ins by programme

Swimmer retention

Structured Academy cohort classes are the engine of attendance (77% of all check-ins), with Club training added in April and growing. Cohort classes are deliberately small groups, so per-session counts of 2–3 swimmers reflect programme design, not demand — the growth lever is more sessions, which is exactly what happened: 4 sessions in February became 21 in May.

Monthly summary

Month	Sessions	Check-ins	Unique swimmers	Avg per session
Feb	4	7	3	1.8
Mar	8	20	5	2.5
Apr	9	20	7	2.2
May	21	49	10	2.3
Jun (to 6 Jun)	4	10	8	2.5

A dependable rhythm

89% of sessions ran on Saturdays — a fixed, predictable weekly block. Of the 16 swimmers who attended, 12 (75%) returned in at least a second calendar month and 6 (38%) were active in four or more of the five months covered. For a young programme, that consistency — same pool, same day, growing numbers — is the foundation the rest of this report is built on.

For Pool Partners

What a SwimBuddz partnership brings to your facility

Why this data matters to a pool operator

SwimBuddz books pool time in scheduled, recurring blocks and fills it with coached, supervised swimmers. The Rowe Park record above shows what that looks like in practice over 18 weeks: utilisation a partner can plan around, demand that compounds month over month, and a per-swimmer headcount that is verified digitally at every session.

- **Predictable, recurring bookings**

A fixed weekly cadence (Saturdays at Rowe Park), growing from 4 to 21 sessions per month — committed pool time, not ad-hoc walk-ins.

- **Verified per-swimmer headcounts**

Every check-in is recorded per swimmer per session on the platform, so per-swimmer fee models are fully auditable rather than estimated.

- **Growing, retained demand**

Five-fold growth in weekly attendance with 75% of swimmers returning across months — a swimmer base that builds, not churns.

- **Structured & supervised use**

Sessions are coached cohort classes and club training with controlled group sizes — orderly facility use during otherwise quiet weekend blocks.

- **Transparent reporting**

Partners receive aggregate session and attendance counts for facility logs — privacy-protecting for members, dependable for your records.

Flexible commercial models

SwimBuddz partners with pools on terms that fit the facility: a flat fee per session block, a per-swimmer fee backed by the verified headcounts above, a revenue share, or a hybrid. Our standard partnership agreement covers scheduling, safety responsibilities, insurance and reporting commitments in full.

Let's talk about your pool.

SwimBuddz is expanding its partner network across Lagos. We bring the swimmers, the coaches, the scheduling and the data — and we treat your facility like our home pool.

Data notes: counts are verified 'present' check-ins by swimmers (coaches/volunteers excluded). June 2026 covers 1–6 June only.

Programme mix: Academy 77%, Club 10%, Community 12% of check-ins. Source: SwimBuddz production attendance records, exported 11 June 2026.
